

Our original range of induction machines (POWERDUCTION + COMBIDUCTION) has been further expanded to include an even-wider range of inductors specifically designed for the various induction processes. The three ranges offered (small, large and complete) can be easily adapted to heat workpieces of every shape and size and make it easier to reach difficult areas. These devices can be combined in numerous different ways, vastly increasing your heating options and satisfying all your induction needs.

COMBINING THE RANGE OF ADAPTORS AND INDUCTORS

The entire automatic-inductor range is ideal for stripping and decoupling as well as removing dents and all other mechanical parts in just seconds. These auto-inductors can be used to support induction machines that have been specially developed for the automotive, bodywork, mechanical or maintenance sectors (GYSDUCTION, COMBIDUCTION, POWERDUCTION 10R).
